The Difference between Life and Death

- ▶ A victim who is bleeding can quickly die BEFORE professional emergency responders can even arrive on the scene
- ▶ Serious bleeding accounts for 35% of prehospital deaths from traumatic injuries
- ▶ Life-threatening bleeding warrants immediate intervention
- ▶ Basic bleeding control provided by bystanders can often be the difference between life and death...

Every Second Counts...

North American Rescue

is leading the way to equip bystanders and initial first responders with the essential medical gear needed to take immediate action in life threatening emergencies. These lifesaving modular aid components are designed for individuals or groups in the workplace, public buildings, and populated public areas to administer immediate bleeding control at the point of wounding.

***Death from
Uncontrolled
BLEEDING
can occur
in as little as
3 to 5 Minutes***

Trauma is a national health problem and after a traumatic injury, bleeding is responsible for over 35% of pre-hospital deaths. Examples of trauma include traffic & industrial accidents, natural disasters, falls, accidental injuries and intentional acts of violence such as shootings, stabbings and bombings.

These types of injuries often result in uncontrolled bleeding. Without immediate intervention these injuries can result in death within minutes – even before emergency medical services or other first responders can arrive.
