

NAR HEMORESPONSE SYSTEM - FEMORAL BLEEDING TRAINING MODULE

HEM  **RESPONSE**™
S Y S T E M

Femoral **Bleeding** Training Module

The HEMORESPONSE™ System – Femoral Injury Training Module from North American Rescue® provides a durable, anatomically relevant platform for teaching femoral trauma assessment and intervention techniques without active bleeding. This module replicates the same injury patterns and wound geometry as the bleeding version, allowing learners to focus on anatomy recognition, treatment placement, and procedural sequencing.

The non-bleeding configuration is ideal for introductory instruction, classroom demonstrations, and skill familiarization where fluid management is not required. Students can practice wound packing technique, tourniquet placement, and direct pressure application while instructors emphasize proper positioning, tension, and anatomical landmarks.

By removing the active bleeding component, the Femoral Injury Training Module reduces setup and cleanup requirements while preserving realism and instructional value. It is well suited for agencies seeking a scalable training solution that supports progressive learning from foundational skills to advanced hemorrhage control scenarios.

The NAR® HEMORESPONSE™ System – Femoral Injury Training Module is designed to be the most realistic, rugged, and durable part-task trainer. This part-task trainer simulator will be valuable to any classroom from a beginning point of injury course to in the field recertification. Designed to be used from the climate controlled class to down in the mud, this simulator can withstand extreme conditions -65°F to +450°F (-53°C to +232°C).

Enhance your hands on instruction with the most realistic, rugged, and durable part-task trainer.

FEATURES/SPECIFICATIONS

- Replicates femoral trauma injury patterns and wound locations
- Supports training in:
 - Wound packing technique
 - Tourniquet placement and positioning
 - Direct pressure application
- No active bleeding for simplified setup and instruction
- Ideal for classroom, skills lab, and introductory training
- Compatible with progressive training programs
