

NAR® SPINE BOARDS

Extremely Thin, Lightweight Spine Board Featuring Tapered Design

The NAR® Spine Board represents the best in product evolution by providing an extremely thin 1.75-inch and lightweight 14-pound long spine board with a payload capacity of 1,000 pounds. The open leg triangle integrates with full-length, molded-in runners to offer the rigidity that concave boards lack while keeping the hand-holds off the ground for ease in lifting. Its flat patient surface does not aggravate cervical spinal injuries or compromise CPR efforts. The tapered design and molded-in runners facilitate extrication, logrolling and easy lifting. Fabricated with an impervious rotomolded HDPE shell and a subtle surface texture preventing slippage that is also easy to clean and disinfect. The NAR Spine Board's four interior slots can be used for pediatric strapping options and separate leg strapping.
