

COMBINATION METAL WALL CASE

An Ideal Solution To Safely Store & Protect

North American Rescue's Combination Metal Wall Case has two compartments to provide high visibility access to critical medical supplies for use by initial first responders and bystanders in public areas. It is an ideal solution to safely store & protect Automated External Defibrillators (AEDs), First Aid Kits, Overdose Kits, and Bleeding Control Kits. The upper section provides the ability to store larger lifesaving devices such as AEDs and Hard Case Trauma and First Aid Kits while the lower section provides the ability to store smaller First Aid, Overdose, and Bleeding Control Kits.

The cold steel cabinet with a white finish features concealed hinges, magnetic closure & recessed handle designed to open with one quick pull, without the need to twist and pull. The wall-mounted design fastens permanently on any wall with the included hardware. Features include a set of highly visible Defibrillator, First Aid Kit, Overdose Kit, and Bleeding Control Kit labels for customization and fast identification, and a clear plexiglass window for viewing station. Cases are water resistant. To best protect your critical lifesaving products, cases are best mounted under cover and out of the direct elements.

AED devices and other supplies are NOT included.
