# BLEEDING INTERVENTION TRAINER - GSW/LAC

The Gunshot Wound and Laceration Wound Bleeding Intervention Trainer is a mobile solution specifically designed for point-of-injury trauma simulation and hemorrhage control. The system incorporates a versatile fluid delivery mechanism, featuring a fluid bag that supports both gravity-fed and manual pump operation, allowing precise control over the delivery of simulated blood.

This kit is designed with training efficiency in mind, featuring two integrated trauma simulation units within a single kit. This dual-injury setup streamlines the training process, allowing instructors to run more dynamic, realistic scenarios without the need for multiple setups. This dual-setup enhances realism and flexibility in medical training environments by enabling multiple injury simulations.

The Gunshot Wound in a Box<sup>®</sup> task trainer simulates a gunshot to soft-tissue, used to instruct students in proper wound packing technique. The representative skin and tissue of this product is constructed of high quality silicone rubber, with layers of coloration that provide a depth and realism to the product. The PATENTED construction with SOFTTECH<sup>®</sup> materials a realistic feel, and is very durable and UV resistant. Blood tubing is integrated into the construction to easily create simulated blood flow. The task trainer is contained in its own storage case.

The Laceration Wound in a Box® task trainer simulates a deep laceration to soft-tissue, used to instruct students in proper wound packing technique. The representative skin and tissue of the product is constructed of high quality silicone rubber, with layers of coloration that provide a depth and realism to the product. The PATENTED construction with SOFTTECH® materials a realistic feel, and is very durable and UV resistant. Blood tubing is integrated into the construction to easily create simulated blood flow. The task trainer is contained in its own storage case.

#### Construction

The representative skin and tissue of the Gunshot Wound (GSW) in a Box® Simulator is constructed of high-quality silicone rubber, with layers of coloration that provide a depth and realism to the product. In addition, the SOFTTECH® material has a realistic feel, and is very durable and UV resistant.

#### Operation

The Gunshot Wound (GSW) in a Box® is contained in its own storage case. The task trainer reinforces wound packing technique for this unique mechanism of injury. Built within a durable Pelican 1500 case, this durable trainer offers two stands for fluid reservoirs to simulate massive hemorrhage.

#### Maintenance

The device should be rinsed in clean, warm water and allowed to dry before storage. The simulation may be removed from the storage case for cleaning. The device may be washed with mild detergents like dish soap. Allow the device to dry fully before storage to prevent mold or mildew growth.

## FEATURES/SPECIFICATIONS

- Easily transportable, yet rugged enough for classroom and field use
- Set up/ Break down in less than a minute

### BLEEDING INTERVENTION TRAINER - LACERATION

#### ITEM #

93-1119

- Highly Adaptive Bleeding Control
- Focused Hemorrhage Control Training
- Patented materials give this product a realistic feel, while still being durable and UV resistant

### DIMENSIONS

- Measurements (Exterior): L 18.5 in. x W 14.06 in. x D 6.93 in. (47 cm. x 35.7 cm. x 17.6 cm.)
- Weight: 14 lbs.

# BLEEDING INTERVENTION TRAINER - GSW/LAC

#### all KITS INCLUDE:

Learn more about this and other Products with a Mission® at www.NARescue.com

# **KIT CONTENTS**

- 1 x Wound in a Box Gun Shot Wound (GSW)
- 1 x Wound in a Box Laceration
- 1 x Blood Supply Pump with Carry Bag
- 1 x Bladder Mounting Rod
- 2 x Simulated Blood 8 oz.

# BLEEDING INTERVENTION TRAINER - LACERATION

ITEM #

93-1119

- 8 x NAR<sup>®</sup> Wound Packing Gauze
- 2 x QuikClot® Combat Gauze Trainer
- 1 x Portable Bleed Tray
- 1 x Pelican Hard Case
