

SMRT™ TASK TRAINER - THIGH WITH GUNSHOT WOUND

STRATEGIC MEDICAL RESEARCH & TRAINING™

Extremity wounds are the most common gunshot wounds seen on the battlefield. This wound realistically simulates a high velocity gunshot wound to the mid-thigh with a permanent wound track from entrance to exit. The unique design prevents slipping during use and realistic blood flow.

The Thigh with Gunshot Wound realistically simulates a high-velocity gunshot wound to the mid-thigh with a permanent wound track from entrance to exit. Tissue is exposed from the wound and a natural flow of blood creates an assessment challenge. The task trainer can be placed anterior, lateral, medial or posterior for different patterns or casualties.

The innovative and wearable SMRT™ Moulage Task Trainers from Strategic Medical Research & Training™ create an unmatched experience of realism featuring realistic moulage and active bleeding across a wide spectrum of woundings and interventions. Made with durable materials and designed for a "one size fits most" range of limb and body sizes, the SMRT™ Moulage Task Trainers are engineered to work with live role players as well as to augment existing simulation systems—while allowing flexibility in placement and utilization. All SMRT™ Moulage Task Trainers work with SMRT™ Trauma Tables, SMRT™ Bleeding Systems, and common hydration systems, making them standalone and ready to use, while also allowing ease of integration into existing training systems. Utilized by Military, Law Enforcement, EMS, and Hospitals to create unsurpassed realism in hemorrhage control training, SMRT™ Training Aids are realistic, cost effective, highly mobile, durable, and low maintenance.
