# SMRT™ TASK TRAINER - SUCKING CHEST WOUND

### STRATEGIC MEDICAL RESEARCH & TRAINING™

The Sucking Chest Wound is a unique wound simulation, which consistently and easily creates a lethal open pneumothorax in your trauma scenarios. This wound system provides audible gurgling and foaming from the simulated chest cavity.

The innovative and wearable SMRT™ Moulage Task Trainers from Strategic Medical Research & Training™ create an unmatched experience of realism featuring realistic moulage and active bleeding across a wide spectrum of woundings and interventions. Made with durable materials and designed for a "one size fits most" range of limb and body sizes, the SMRT™ Moulage Task Trainers are engineered to work with live role players as well as to augment existing simulation systems—while allowing flexibility in placement and utilization. All SMRT™ Moulage Task Trainers work with SMRT™ Trauma Tables, SMRT™ Bleeding Systems, and common hydration systems, making them standalone and ready to use, while also allowing ease of integration into existing training systems. Utilized by Military, Law Enforcement, EMS, and Hospitals to create unsurpassed realism in hemorrhage control training, SMRT™ Training Aids are realistic, cost effective, highly mobile, durable, and low maintenance.

### FEATURES/SPECIFICATIONS

- Unsurpassed realism in hemorrhage control training
- One size fits most range of limb and body sizes

- Sucking Chest Wound compatible with other SMRT™ Task Trainers
- Available in Light Tone or Deep Tone
