

TECHLINE TRAUMA WEARABLE EVISCERATION (NON-PACKABLE)

Minimizes Moulage Requirements – While Maximizing Realism.

The Techline Trauma® Wearable Evisceration simulates a deep laceration with exposed bowel and fat tissue while offering realistic blood flow.

The Techline Trauma® Wearable Evisceration Simulator from North American Rescue® Simulation and Techline Technologies, Inc., is a silicone prosthetic device enabling live action role players to simulate a real-world evisceration injury. The soft, flexible, light toned skin wraps comfortably around the abdomen and attaches with the sewn hook and loop connectors. This realistic injury features exposed bowel and fat tissue and includes an integrated bleeding system tube that allows role players or manikins to demonstrate active bleeding during scenarios. Enhancing realism creates a valuable training event that better prepares first responder trainees for real-world situations. Easily cleaned and reusable, this tool enables rapid preparation for training exercises and minimizes moulage requirements – while maximizing realism.

The Techline Trauma® Wearable Evisceration is manufactured by Techline Trauma® and is compatible with all TOMManikin® and TAMlkin® simulators.

Role player use requires blood supply pump (sold separately).
