The SMRT™ TC3 Training Kit Assemblage is a highly portable field training kit that delivers the critical training models to allow you to deliver quality tactical medicine training in a small package. The wounds included in this training kit focus on the primary Massive/Major bleeding control and airway management skills needed to perform TCCC or TECC treatments in the field. Create simulated casualties that will challenge your students. The TC3 Training Kit Assemblage comes in three levels depending on the types and quantities of included Task Trainers: I, II, III.

The innovative and wearable SMRT™ Moulage Task Trainers from Strategic Medical Research & Training™ create an unmatched experience of realism featuring realistic moulage and active bleeding across a wide spectrum of woundings and interventions. Made with durable materials and designed for a "one size fits most" range of limb and body sizes, the SMRT™ Moulage Task Trainers are engineered to work with live role players as well as to augment existing simulation systems—while allowing flexibility in placement and utilization. All SMRT™ Moulage Task Trainers work with SMRT™ Trauma Tables, SMRT™ Bleeding Systems, and common hydration systems (all sold separately), making them standalone and ready to use, while also allowing ease of integration into existing training systems. Utilized by Military, Law Enforcement, EMS, and Hospitals to create unsurpassed realism in hemorrhage control training, SMRT™ Training Aids are realistic, cost effective, highly mobile, durable, and low maintenance.
