

TECHLINE TRAUMA WEARABLE LEG AMPUTATION

Minimizes Moulage Requirements – While Maximizing Realism.

The Techline Trauma® Wearable Leg Amputation presents an amputated leg with realistic weight. The wound shows exposed bone, muscle, fat and tendons and bleeds with tourniquet and pressure responsive blood flow.

The Techline Trauma® Wearable Leg Amputation Simulator from North American Rescue® Simulation and Techline Technologies, Inc., is a silicone prosthetic device enabling live action role players to simulate a real-world amputation injury. The soft, flexible, light toned skin wraps comfortably around the thigh and attaches with the sewn hook and loop connectors. This realistic injury features exposed tissue, fat, bone and muscle and includes an integrated bleeding system tube that allows role players or manikins to demonstrate active bleeding during scenarios. Enhancing realism creates a valuable training event that better prepares first responder trainees for real-world situations. Easily cleaned and reusable, this tool enables rapid preparation for training exercises and minimizes moulage requirements – while maximizing realism.

WEARABLE LEG AMPUTATION
