DERMACLIP® BANDAGE

LARGE & REGULAR

The DermaClip® Large 1-Clip is a needle-free wound closure device designed for higher-tension wounds and longer, straight incisions. Its mechanical closure system approximates wound edges and provides consistent wound edge eversion without sutures, staples, or tissue adhesive. The 21 mm clip is ideal for surgical closure and medical applications where precise, reliable wound approximation is required. Each package contains one clip, providing up to 1 inch of closure length.

The DermaClip® Regular 2-Clip Pack is designed for laceration repair and wound closure in emergency, urgent care, and clinical settings. The 11 mm clips are well-suited for curved wounds and short lacerations, providing a practical alternative to traditional closure methods. Each package contains two clips designed to close up to 1 inch of incision length.

The DermaClip® Regular 5-Clip Pack contains five 11 mm clips designed to close up to 3 inches of incision length. Multiple packages can be used for longer wounds.

Close Wounds in Seconds!
