

NARCAN® *Naloxone Hydrochloride*

Pure Opioid Antagonist...

Naloxone, also known as Narcan®, is a medication used to reverse the effects of opioids especially in overdose. As a pure opioid antagonist, it works by reversing the depression of the central nervous system and respiratory system caused by opioids.

Opioids include heroin and prescription pain pills like morphine, codeine, oxycodone, methadone and Vicodin. When a person is overdosing on an opioid, breathing can slow down or stop and it can be very hard to wake them from this state.

While paramedics have carried naloxone for decades, law enforcement officers in many states throughout the country carry naloxone to reverse the effects of heroin overdoses when reaching the location prior to the paramedics.

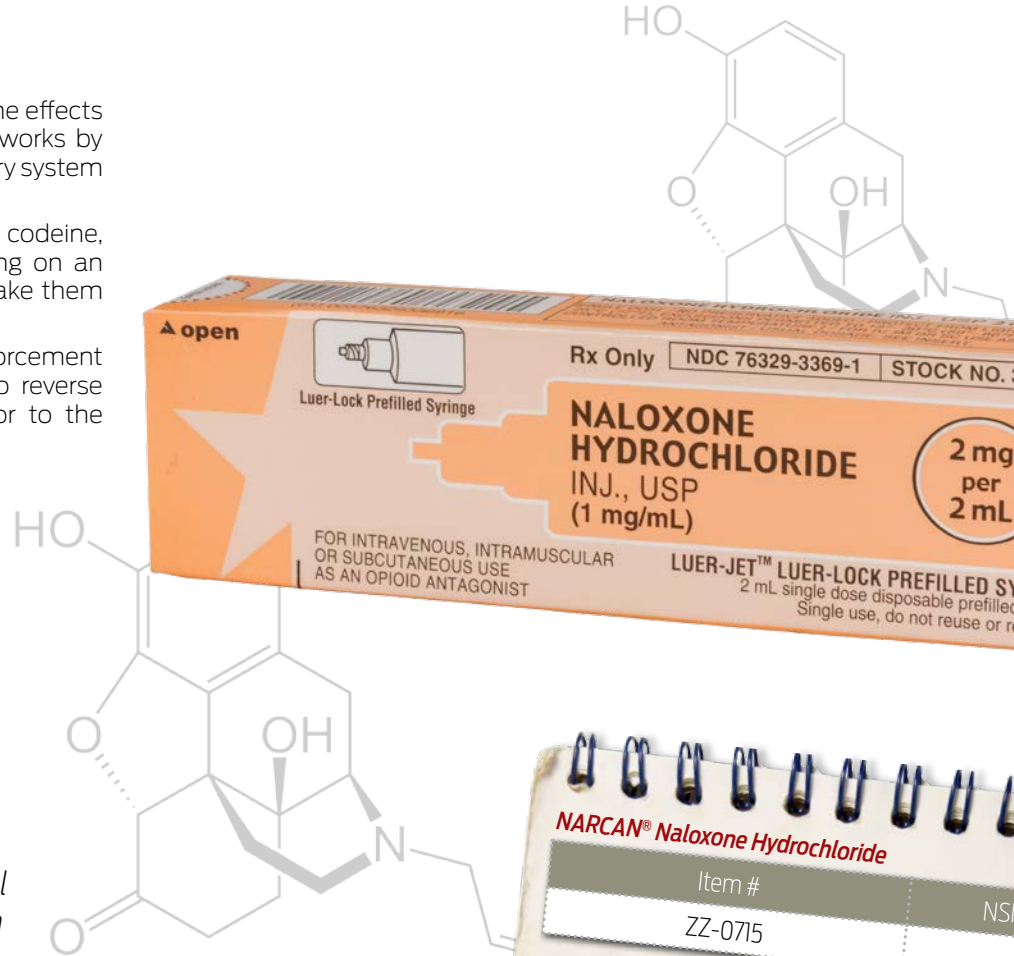

Features:

- Sterile opioid antagonist
- Helps prevent overdose deaths caused by opioids
- Comes ready-to-use in single dose Luer-Jet™ Prefilled Syringe
- One Time Use
- For intravenous, intramuscular or subcutaneous use
- Medical device authorization required.

Dimensions:

- Unit Size: 2mg/2ml

Complete Kits (with multiple options) containing Narcan® and all the individual components needed to treat an Opioid Overdose in the pre-hospital environment are also available, please visit www.NARescue.com for more details.
