

Ballistic Protection

BALLISTIC PROTECTION | BALLISTIC VEST SYSTEMS | MEDICAL SUPPLIES

OVERVIEW

Body Armor

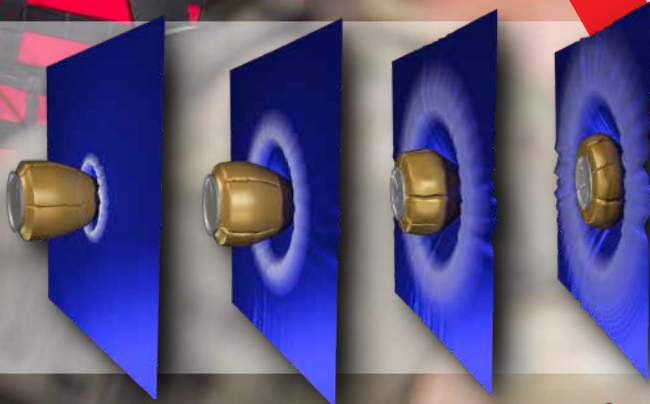

The term body armor is generally used to describe vests designed to provide ballistic protection to the vital organs in the torso, armor has typically been associated with tactical medics and rescue task force members whose primary objective is to provide medical care in high threat environments. With the increase of active shooter and mass casualty incidents in today's field of operation, Fire & EMS personnel are realizing the critical need for ballistic protection on a daily basis.

Though Fire & EMS personnel have been limited to adapting body armor traditionally designed for the military & law enforcement, North American Rescue is now confronting this challenge by designing ballistic solutions specifically for the unique needs of the Fire & EMS community.

Soft & Hard | 2 Main Types of Body Armor

SOFT ARMOR offers critical protection against handgun threats along with the capability for extended daily wear. NAR provides an optimal over-the-uniform soft armor vest that features flexible layers of ballistic resistant materials constructed from a synthetic Aramid fiber with a very high strength to weight ratio. These super strong fibers are woven into multiple layers that are stacked to create an armor panel. The number and orientation of each layer influences its overall performance. When a handgun bullet strikes the armor panel, it gets caught in a web of high performance fibers that stretch and disperse the impact energy causing the bullet to deform or "mushroom". This dispersion of energy not only prevents bullet perforation, but also helps minimize the possible injury to underlying tissue.

How Soft
Armor
disperses
energy
from a
handgun
projectile...

HARD ARMOR is designed to provide a higher degree of protection from rifle threats. Constructed from a variety of hard ballistic-resistant materials such as ceramic, compressed UHMWPE (ultra-high-molecular-weight-polyethylene), metallic plates, or a composite of multiple materials, each of these rigid materials offer their own unique properties. Ceramic materials, for example, are required for so called "armor piercing" bullets or special threats. Hard armor plates are classified as either Stand-Alone (no soft armor required) or ICW - *in conjunction with* (soft armor backing panel required) and rated as single hit or multi-hit. ▶

NO armor is 100% bullet proof!

One truth stands out when it comes to protective gear – ballistic protection is NOT created equal. Differing armors are designed to protect against specific types of ammunition, and no body armor will stop every threat. So when choosing a ballistic solution, consider the threats most likely to be faced in your area of operation. At a bare minimum, armor should protect against handguns.

NIJ 0101.06 Ballistic Standards

Special Threats

In addition, the FBI and DEA have developed their own stringent protocols to test body armor that exceeds the NIJ standards.

5.56mm ammunition (M855)

was designed for military use and has a steel core. It is the most common and widely used AR ammo on the market today. To provide requisite protection, a ceramic component must be included in the hard armor plate.

Choose the right ARMOR for YOU...

There are several key considerations in choosing the right body armor: level of protection, weight, comfort, mobility, and cost. It is important to choose an armor system that will provide protection but also enhance your ability to perform your job. Particularly for Fire & EMS personnel, it is critical that the system facilitates your ability to provide the life saving skills and equipment.

North American Rescue has the optimal ballistic protective solution designed as a system specifically for Fire & EMS personnel and the duties they must perform.

The **National Institute of Justice (NIJ)** is the government agency responsible for establishing performance standards and testing certification for body armor. These body armor classifications: levels IIA, II, IIIA, III and IV correspond with the weaponry they protect against. NIJ certified armor ensures ballistic performance and the completion of proper testing standards.

The NIJ conducts two types of ballistic testing: Perforation/BackFace Signature (P-BFS) and Ballistic Limit (V50). No complete or partial perforation of the armor panel is allowed during testing. In addition, no more than 44mm (1.73 inches) of indentation is allowed into the ballistic clay backing utilized during shoot testing. The back face signature translates to the upper tolerable limits of blunt force injury to the user. The ballistic limit (V50) is the velocity at which the projectile is expected to perforate the armor 50% of the time. It is important to ensure that any armor package has been certified by an NIJ approved laboratory.

Level IIA:

Tested to stop 9mm and .40 S&W ammunition fired from short barrel handguns

No rifle ammunition protection

Level II:

Tested to stop 9mm and .357 Magnum ammunition fired from short barrel handguns

No rifle ammunition protection.

Level IIIA:

Tested to stop .357 SIG and .44 Magnum ammunition fired from longer barrel handguns.

No rifle ammunition protection

Level III:

Tested to stop 7.62mm FMJ (full metal jacket) lead core rifle ammunition

Level IV:

Tested to stop .30 cal steel core armor piercing rifle ammunition

NIJ Threat Projectiles & Related Armor Classifications

MKIII TACTICAL RESPONDER BALLISTIC VEST *with Cummerbund*

- Developed for providing Fire and EMS personnel in active shooter and mass casualty incidents with Level IIIA Soft Armor Ballistic Protection
- Allows for full range of motion while providing superb coverage area
- Includes front and rear NIJ 0101.06 Level IIIA ballistic panels and two integrated plate pockets designed to accommodate additional 10 in. x 12 in. or 11 in. x 14 in. hard armor plates (each sold separately)
- Featuring extra side protection with Level IIIA armor cummerbund equipped with easy hook and loop attachment to the vest for rapid user adjustment
- MOLLE-style PALS webbing on the front, back and around the waist allows for attaching extra gear and for unit customization
- Rapidly adjustable armor system customizes to any team member's frame within seconds
- Can be stored in and deployed from all standard emergency vehicles

RTF TACTICAL RESPONDER BALLISTIC VEST SYSTEM

The practical solution for Fire and EMS personnel in active shooter and mass casualty incidents, with an emphasis on integrating Tactical Emergency Casualty Care...

- NIJ 0101.06 Level IIIA Soft Armor Ballistic Protection equipped with medical supplies that address the leading causes of preventable death in the tactical environment
- Front and back hard armor plate pockets able to accommodate additional 10 in. x 12 in. or 11 in. x 14 in. hard armor plates (each sold separately)
- Includes Cummerbund-style Side Armor Protection with easy hook and loop attachment to the vest for rapid user adjustment - expandable up to 62 in.
- MKIII RTF Vest Tactical Responder Vest System includes:
1 x MKIII Tactical Responder Ballistic Vest with Cummerbund
1 x RTF Chest Pouch Medical Kit with Luminous Med ID Patch
2 x Nylon Tourniquet Holder with C-A-T®
- ID patches are also available for separate purchase and are customizable upon special request.
