

EZ-IO® G3 POWER DRIVER NEEDLE SETS

For use with the EZ-IO® G3 Power Driver

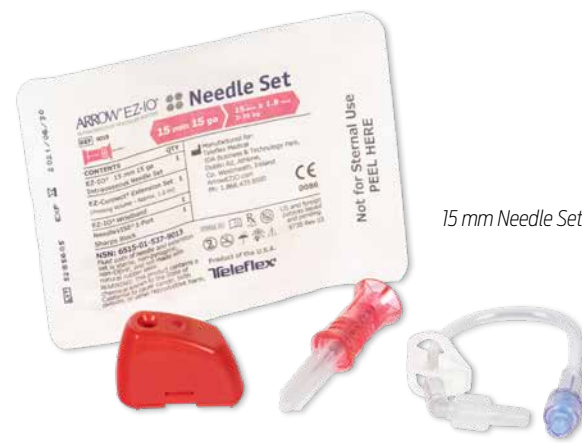

REV100620

Immediate Vascular Access to the central circulation within seconds...

EZ-IO® provides the medical professional immediate vascular access to the central circulation within seconds, delivering medications, intravenous fluids and blood products to adult and pediatric patients. With a specially designed cutting IO needle, manual driver, or small power driver, the EZ-IO® allows the clinician complete control — avoiding the use of force. EZ-IO® provides rapid, smooth entry into the bone's medullary cavity, creating an immediate conduit to the central circulation.

The EZ-IO® Intraosseous Infusion System is the leading choice for intraosseous access across multiple health care settings, and is used by 90 percent of US advanced life support ambulances, over half of US Emergency Departments, and the US Military.

Unlike older IO technology, the EZ-IO®'s patented needle tip has four asymmetrical bevels on the stylet, and two cutting tips on the catheter, providing a smooth and accurate insertion. Black indicator lines are located at 5 mm increments from the hub for assessing insertion depth. With EZ-IO®, insertion depth is completely controlled by the clinician.

15 mm Needle Set

45 mm Needle Set
